Discussion on future
developments

Let's talk about algorithms

Algorithms are the technological solution to the information overload.

Unfortunately, they can also end up reinforcing the **preexisting beliefs** of the person who programmed them.

Those intrinsically embedded assertions, called *bias*, do have an impact on the dissemination of ideas and culture.

For example, the spreading of online news (and other contents like porn)
consumption is increasing year after year;

Algorithmic mediation is a crucial issue for our democracy.

Roughly half of Americans prefer to get news on a digital platform; about a third prefer TV

% of U.S. adults who prefer ____ for getting news

Note: Digital platforms includes respondents who said they prefer news websites or apps, social media, search, or podcasts.

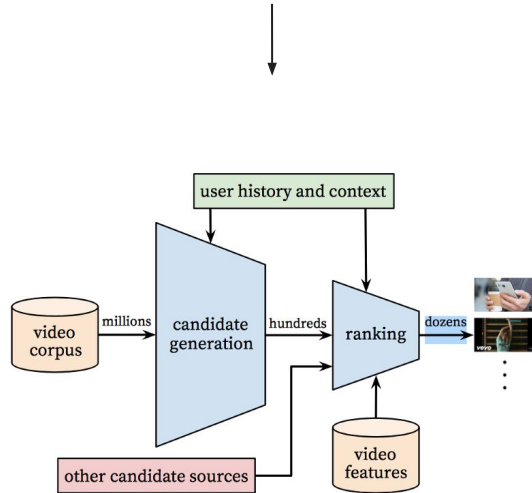

Source: Survey of U.S. adults conducted Aug. 31-Sept. 7, 2020.

PEW RESEARCH CENTER

52% of US adults consume news through Digital Platform, 23% of U.S. adults regularly getting news on Youtube.

70% of the watch time is from YouTube's suggested videos. (Youtube, 2018)

Pew Research Center survey

Compare the personalization

Users and researchers can compare the personalization seen on a specific video with auto-generated graphs and datafiles

Why you can't trust API

Controlled experiments

(socks puppets audit)

Researchers design an experiment, they keep under control as many variables as possible, sometimes they use bots.

Collective observations

(crowdsourced audit)

People of the web perform the same actions on the platform, recording evidence about the algorithm with TREC

KYOUNG**

Theoretical framework

Echo Chamber → The political ideology of the subject and the consequent watching choices. Based on ideological affinity, are created by users (Dubois '18).

Filter bubble → Direct effect of algorithmic personalization, based on the users' behavior (Eli Pariser '11).

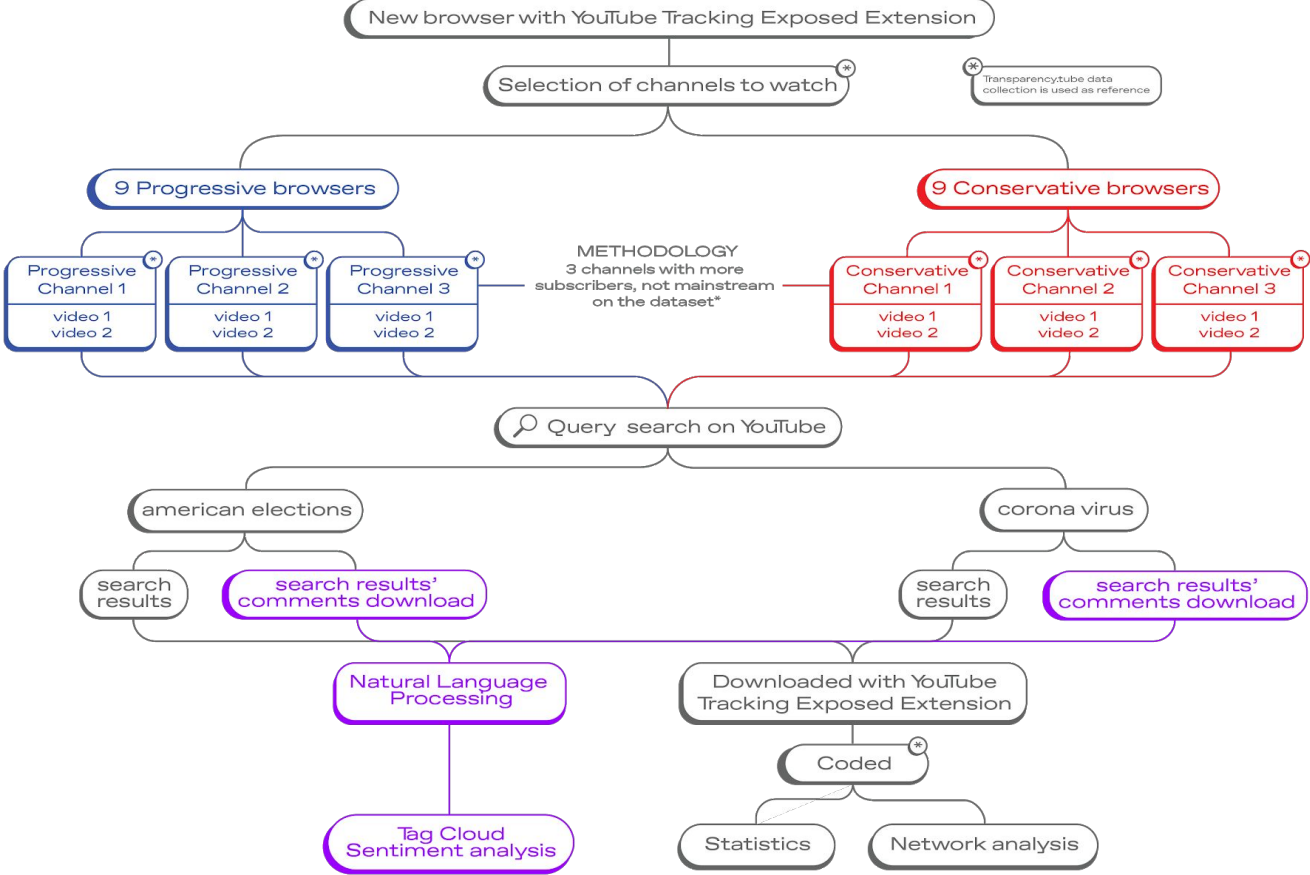

Polarization → Process of increased segregation into distinct social groups, separated along racial, economic, political, religious or other lines (Gallacher & Heerdink '19).

Methodology

Heteronormativity and Pornography: an Algorithmic Analysis of PornHub

Ilir Rama, Lucia Bainotti, Alessandro Gandini, Giulia Giorgi, Silvia Semenzin, Claudio Agosti, Giulia Corona, Salvatore Romano

Popular pornographic websites are deemed to reinforce a male, white and heterosexual point of view, and thus contribute to **foster hegemonic masculinity**, the sexualization of minorities, and a heteronormative porn culture.

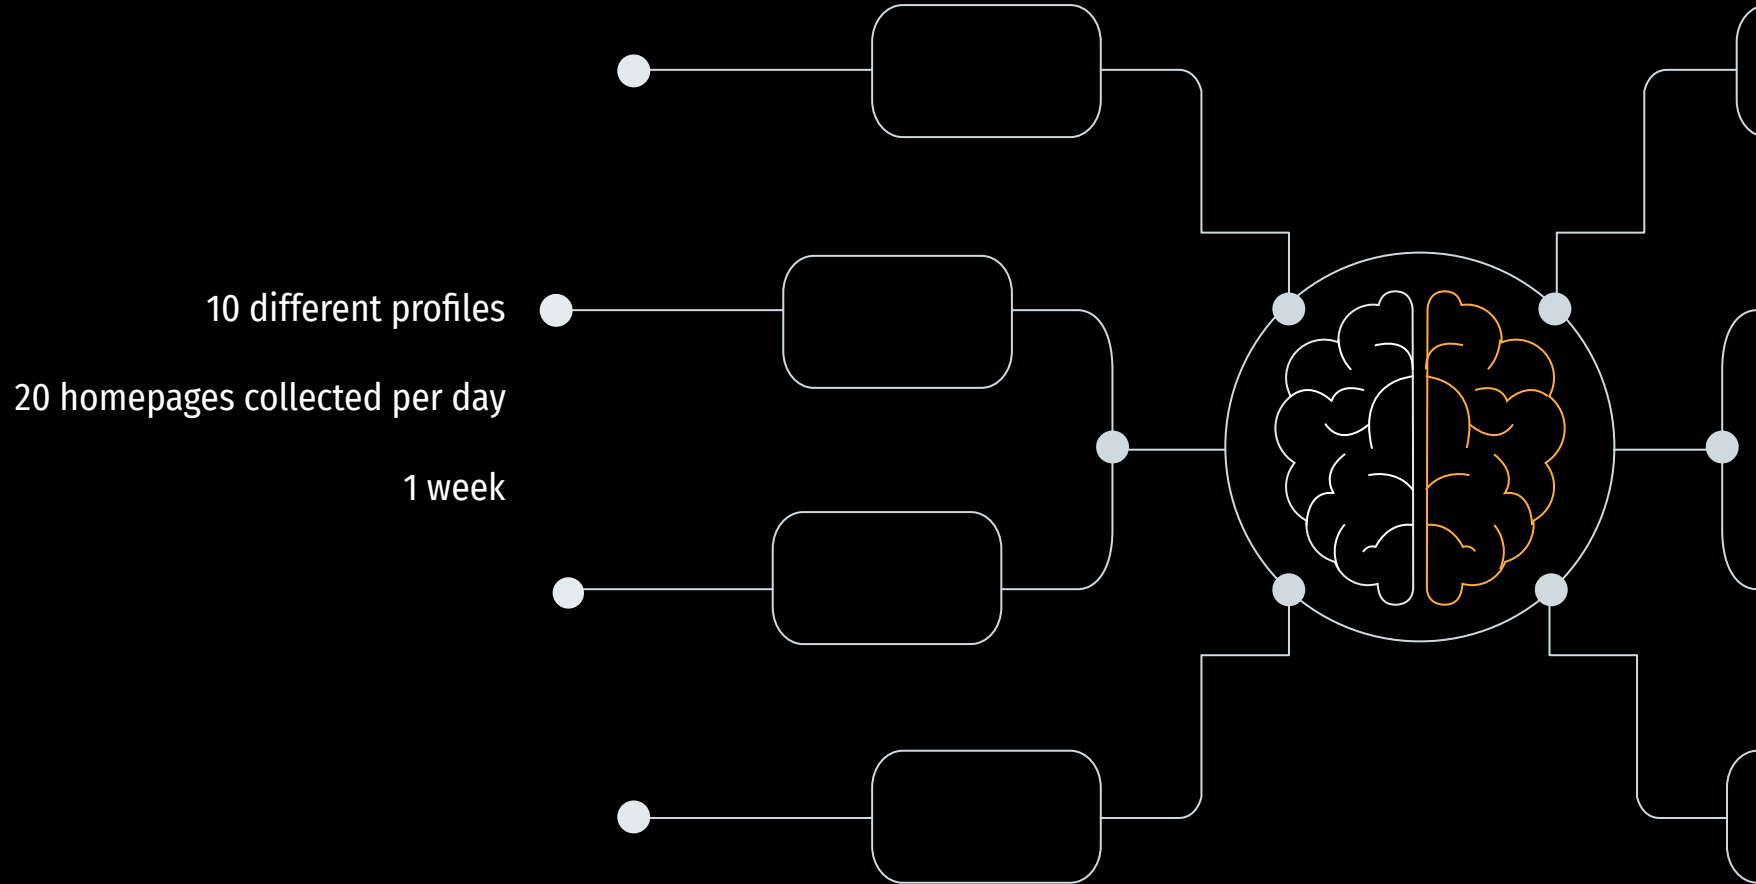

(Burke 2016. Fritz et al. 2020. Saunders 2020.)

Algorithms contribute to **manage content visibility** and can reiterate the gender bias coded into them, reifying a specific view of the world due to their social embeddedness.

(Bucher 2012. Noble 2018)

Videos in **Recommended Category** for You based on users' profiles.

Not all the profiles had the Recommended Category for you section. Some clusters are still visible.

The lack of **awareness and empowerment** in internet users has a massive impact on their ability to truly benefit from digital innovation and often creates the **foundation for their exploitation.**

Con clu sio ns

Those **bias** is not a technological problem,
therefore the solution cannot be only
technological. We have to deconstruct social
stereotypes and their algorithmic expressions.

Con clu sio ns

Tracking Exposed is just one of the **many steps** we need to take in order to create a way out of Surveillance Capitalism

Thank you!
