 The way you move your mouse while lazily browsing the internet could be unique enough to be used to track you—and even to identify and unmask you.

 A security researcher has [devised a way](#) to create a unique fingerprint of internet users that could potentially be used to track them when using the Tor browser, a well known anonymity software.

If you have a smartphone, chances are it's able to tell how dark or bright its surroundings are.

Thanks to the phone's light sensor, advertisers, online trackers, and perhaps even law enforcement might soon have a chance to use that feature to track and profile you, according to a privacy and security researcher who warned of the potential dangers posed by ambient light sensors.

Cross-Device Tracking: How the Ad Industry Will Follow You Wherever You Go

Rob Pegoraro
Contributing Editor
November 17, 2015

Image: FTC.gov

Does your smartwatch know you're reading this on your laptop?

If the ad industry's ambitions pay off, online marketers will be able to do the next best thing: fine-tune the sales pitches displayed on one device based on what you've seen on the others. It's called "cross-device tracking," and you're probably going to start hearing a lot more about it.

No IP address is an island

As participants at [a workshop hosted Monday by the Federal Trade Commission](#) in Washington, D.C., explained, the basic problem here is one you experience every time you fumble for the right charger or cable: We use too many devices.

Yet many of the traditional tools and networks employed to present ads we might care about — such as "cookie" files that identify particular browsers — date to a time when most of us used just one.

"It's harder to get a consistent viewpoint on what [people are] doing online," observed FTC Policy Director Justin Brookman as he opened the discussion.

Lest you see that as a feature, not a bug, remember that you are probably already

What is user id and why you need it?

User id is simply a unique set of alphanumeric characters (like UD23ddd3432) assigned to a user so that he/she can be identified across devices/ browsers and over the course of multiple sessions.

Verizon Injecting Perma-Cookies to Track Mobile Customers, Bypassing Privacy Controls | Electronic Frontier Foundation

ELECTRONIC FRONTIER FOUNDATION
DEFENDING YOUR RIGHTS IN THE DIGITAL WORLD

HOME ABOUT OUR WORK **DEEPLINKS BLOG** PRESS ROOM TAKE ACTION SHOP

NOVEMBER 3, 2014 | BY JACOB HOFFMAN-ANDREWS

Verizon Injecting Perma-Cookies to Track Mobile Customers, Bypassing Privacy Controls

Verizon users might want to start looking for another provider. In an effort to **better serve advertisers**, Verizon Wireless has been silently modifying its users' web traffic on its network to inject a cookie-like tracker. This tracker, included in an HTTP header called **X-UIDH**, is sent to every unencrypted website a Verizon customer visits from a mobile device. It allows third-party advertisers and websites to assemble a deep, permanent profile of visitors' web browsing habits without their consent.

Verizon apparently created this mechanism to expand **their advertising programs**, but it has privacy implications far beyond those programs. Indeed, while we're concerned about Verizon's own use of the header, we're even more worried about what it allows *others* to find out about Verizon users. The X-UIDH header effectively reinvents the cookie, but does so in a way that is shockingly insecure and dangerous to your privacy. Worse still, Verizon doesn't let users turn off this "feature." In fact, it functions even if you use a private browsing mode or clear your cookies. You can test whether the header is injected in your traffic by visiting lessonslearned.org/sniff or amibeingtracked.com over a cell data connection.

Cookies that give you away: The surveillance implications of web tracking

APRIL 4, 2014 BY DILLON REISMAN

[Today we have another announcement of an exciting new research paper. Undergraduate Dillon Reisman, for his senior thesis, applied our [web measurement platform](#) to study some timely questions. -Arvind Narayanan]

Over the past three months we've learnt that NSA uses third-party tracking cookies for surveillance (1, 2). These cookies, provided by a third-party advertising or analytics network (e.g. doubleclick.com, scorecardresearch.com), are ubiquitous on the web, and tag users' browsers with unique pseudonymous IDs. In a [new paper](#), we study just how big a privacy problem this is. We quantify what an observer can learn about a user's web traffic by purely passively eavesdropping on the network, and arrive at surprising answers.

At first sight it doesn't seem possible that eavesdropping alone can reveal much. First the eavesdropper on the Internet backbone sees millions of HTTP requests and responses. How can he associate the third-party HTTP request containing a user's cookie with request to the first-party web page that the browser visited, which doesn't contain the cookie? Second, how can visits to different first parties be linked to each other? And finally, even if all the web traffic for a single user can be linked together, how can the adversary go from a set pseudonymous cookies to the user's real-world identity?

Freedom to Tinker is hosted by Princeton's Center for Information Technology Policy, a research center that studies digital technologies in public life. Here you'll find comment and analysis from the digital frontier, written by the Center's faculty, students, and friends.

NSA Tracks People Using Google Cookies - Schneier on Security

Schneier on Security

Blog Newsletter Books Essays News Talks Academic About Me

[Blog >](#)

NSA Tracks People Using Google Cookies

The *Washington Post* has a [detailed article](#) on how the NSA uses cookie data to track individuals. The EFF also has a [good post](#) on this.

I have been writing and saying that [surveillance is the business model of the Internet, and that government surveillance largely piggy backs](#) on corporate capabilities. This is an example of that. The NSA doesn't need the cooperation of any Internet company to use their cookies for surveillance purposes, but they do need their capabilities. And because the Internet is largely unencrypted, they can use those capabilities for their own purposes.

Reforming the NSA is not just about government surveillance. It has to address the [public-private surveillance partnership](#). Even as a group of large Internet companies have come together to [demand government surveillance reform](#), they are ignoring their own surveillance activities. But you can't reform one without the other. The Free Software Foundation has [written about this](#) as well.

Little has been written about how [QUANTUM](#) interacts with cookie surveillance. QUANTUM is the NSA's program for real-time responses to passive Internet monitoring. It's what allows them to do packet injection attacks. The NSA's [Tor Stinks](#) presentation talks about a subprogram called QUANTUMCOOKIE: "forces clients to divulge stored cookies." My guess is that the NSA uses frame injection to surreptitiously force anonymous users to visit common sites like Google and Facebook and reveal their identifying cookies. Combined with the rest of their cookie surveillance activities, this can de-anonymize Tor users if they use Tor from the same browser they use for other Internet activities.

How does cookie sync work between DMP and DSP?

1 Answer

 **Ben Kneen**, Former Product Manager for PayPal's Ad-Focused DMP
22.6k Views

It depends on the DMP and DSP, but in an ideal world, there would be a server-to-server integration based on a frequency capped pixel fired from a universal container on the client site.

Here's how it would work -

1. The client puts the DMP universal container tag on their website. This is a simple piece of javascript that controls which pixels are called by a user visiting a page on the client's website. Using a universal container, the client can control additional pixel calls to fire on its users in a dynamic fashion, and control the frequency of how often those pixels drop. The more pixel calls, the more latency on the page, so it makes sense to frequency cap any cookie sync process.
2. The client would, through the DMP's UI, place a pixel from the DSP in the universal container. So now, when a user calls the DMP's universal container tag on the client's site, the DMP in turn calls the DSP's pixel into that universal container. Plainly speaking, a user's browser on the client's site receives a cookie from both the DMP and the DSP. The DMP and the DSP can now both assign an ID to that user.
3. Here's how the sync happens - when the DMP makes that call to the DSP, it also

2. Implement Cookie Synching with the Ad Exchange to map Ad Exchange users to Ford users.

5e. Targeted Ford Ad

The complete sequence of steps is presented below:

1. Acme and Ad Exchange implement Cookie Synching — Acme can map the Ad Exchange user ID from the Ad Exchange to the Acme ID for the same user
2. Ford tags all of their pages with Acme's Pixel Tag (`JavaScript/Frame/IMG`)

HINT1: server to server è male.

BlueKai Data Activation System: Twitter Tailored Audiences

USING WHAT YOU KNOW, TO POWER WHAT YOU DO

Overview Of Partnership

Twitter has selected BlueKai as a partner for its recently launched tailored audiences product for marketers and publishers. As a partner, BlueKai will enable marketers and publishers to leverage 1st and 3rd party audience data to power native ad targeting on Twitter.

Prior to tailored audiences, contextual targeting was the primary driver for Twitter campaigns. Now, with the ability to pass 1st party, 3rd party, offline and modeled data to Twitter, BlueKai clients can extend their audience targeting strategy using their own audience intelligence to improve relevancy, engagement and reach. In addition to improved ad targeting, clients can also use BlueKai Audience Analytics to learn more about their audience composition on Twitter.

Partnership Details

- 1 Activate 1st party, 3rd party, offline, and modeled data to target customers on Twitter media
- 2 Leverage automated audience delivery to seamlessly apply your data to Twitter media campaigns
- 3 Speak to your audience on the most engaged social platform with custom messaging based on user preferences and brand engagements
- 4 Reach a highly engaged mobile audience across multiple devices

AddThis: A Buyer's Guide

DATA TYPES: Auto, B2B, Behavioral, CPG, Demographic, Financial, Offline Match, Political, Retail, Seasonal, Social/Lifestyle, Travel

AddThis Data 101

AddThis helps brands build more authentic customer relationships through insight, activation and personalization products powered by the AddThis Audience Intelligence (Ai) platform. AddThis Ai processes the real-time interest and intent data from 1.9B monthly uniques across 15M domains. AddThis' reach, combined with world-class data science and seamless integration across the marketing ecosystem, gives marketers and advertisers unprecedented transparency into target audiences and enhances their ability deliver effective personalized experiences across paid and owned media.

Description of Data Types:

AddThis has intent-based segments, interest segments and includes social data segments. These high performance segments have great reach and scale in the industry. AddThis pinpoints in-market prospects that are the most likely to convert and are optimized and scaled using social and behavioral data. AddThis also models all the search, social and metadata with a full data science team. All data types are available to target international audiences in almost all countries. This data is used for every vertical (Auto, Retail, CPG, Travel, Financial Services), season (Holiday, Back to School, Mother's Day, etc.) and type of buy (Social, Direct Response, Branding).

26 | Oracle Data Cloud International: UK, CAN, AUS, FR, DE, BR, SP, MEX, JPN, IN, IT, KR, ID

Collection Methodology:

AddThis sees observed and declared actions for each unique visitor on every page across our 15M site-strong publisher network. Our proprietary blend of observed (e.g., arriving on site from search, content on page, reading on article, scrolling, watching a video) and declared (e.g., click, like, share, follow, print) data yields a holistic picture of each user's true web habits, interests and preferences in real-time – providing unmatched audience insight and unparalleled audience segment quality and scale.

Use Our Data For:

- Understanding how consumers in your CRM act across the web
- Reaching hard to find users with a specific interest or intent
- Marketing to your brand advocates & socially active consumers
- Finding users who are likely to convert by modeling your existing converters

comScore TV: A Buyer's Guide

DATA TYPES: Auto, Demographic, Financial, Offline Match

comScore TV Data 101

comScore TV (formerly Rentrak) is the entertainment industry's premier source for measuring who is going to the movies and who is watching TV across every screen—every day, every second, everywhere. By collecting viewing information from tens of millions of televisions with actual consumer behavior and purchasing information, only comScore TV provides the stable and robust audience measurement and targeting services on which industry professionals have come to rely to precisely measure what consumers are watching.

Description of Data Types:

comScore TV makes 301 television audience segments available for digital ad targeting. These 301 syndicated audiences are based on genre, daypart and a single network definition for each of the ~250 networks comScore TV reports.

- **Daypart segments** – Daytime, Early Fringe, Early Morning, Late Fringe, Overnight, Prime and Prime Access.
- **Genre segments** – Action/Adventure, Animation, Comedy, Cooking, Documentary, Drama, Educational, Foreign Language, Game Show, Home & Garden, Kids, Movies, Music, Horror, News, Paid Programming, Politics, Reality, Science Fiction, Soap Operas, Sports, Talk, Travel, Variety and Home Shopping.

- **Network segments** – comScore TV provides data on more than 250 broadcast and cable networks. A complete list of networks is available through Oracle BlueKai.

Custom segments are available outside of the Oracle BlueKai marketplace and your Oracle or comScore TV representative can help you.

Collection Methodology:

comScore TV precisely measures and reports TV viewership, using second-by-second intelligence collected from more than 36 million televisions. By integrating TV viewing information with consumer segmentation systems, syndicated consumer behavior and other transactional sources, comScore TV empowers stakeholders—agencies, advertisers, and television networks—to direct the right message at the right audience.

Use Our Data For:

- Extending the reach or frequency of your existing television campaign in the digital market
- Maximizing your cross-screen marketing by taking advantage of this data and technology
- Use the brand and awareness power of television and take advantage of digital targeting to maximize your media investment

Dun & Bradstreet: A Buyer's Guide

DATA TYPES: B2B, Offline Match

Dun & Bradstreet Data 101

Dun & Bradstreet is the world's leading source of commercial and business insight. Powered by a global database of 240 million business records, our propriety D-U-N-S number and DUNSRight quality process, data integrity is the foundation of all of our solutions.

This rigor and expertise now extends to digital marketing via our best-in-class Audience Solutions. Leveraging D&B's assets and quality assurance processes enables us to provide a range of digitally addressable audiences for B2B marketers.

Description of Data Types:

Dun & Bradstreet Audience Solutions provides over 150 actionable audience segments to suit a range of B2B online targeting needs. These segments include:

- Company
 - » Employee size, revenue size, maturity
- Industry Classifications
 - » SIC and NAICS industry categorizations
- Functional Area
 - » Area of responsibility and domain expertise

72 | Oracle Data Cloud

- Seniority
 - » Business or equivalent organizational seniority
- Decision Makers
 - » IT, Financial and business decision makers

Collection Methodology:

Dun & Bradstreet aggregates, curates and synthesizes over 30,000 data sources globally, including contact-level data made available on an anonymous basis to customers for offline sales and marketing. Audience Solutions takes that process a step further, bringing offline data online, using methods compliant with the highest standards of PII protection and privacy. Audience Solutions continually discovers, evaluates and harmonizes new data sources, leveraging proprietary technology to offer continually expanding addressable audiences for the B2B marketer.

Use Our Data For:

For the B2B marketer, Audience Solutions data provides a powerful facility to discover, engage and verify professional audiences online through programmatic and non-programmatic buying, and on-site visitor engagement. For direct response or awareness, use our digital audience data to eliminate waste when seeking high-value, hard-to-reach audiences in digital channels.

Forbes

Forbes: A Buyer's Guide

DATA TYPES: Auto, B2B, Financial, Offline Match, Political, Seasonal, Social/Lifestyle, Telecommunications, Travel

Forbes Data 101

Serving as the world's definitive source for business and finance news since 1917, Forbes and its Premium Data Platform offer unparalleled access to a highly affluent and connected audience of insiders, innovators and influencers. Advertisers look to Forbes for exclusive access to the business community and the rest of the world's elite with custom built, highly specified segments and exclusive targeting solutions.

Description of Data Types:

Forbes Premium Data is arranged by channel and section in correspondence to Forbes.com. Channels include Business, Investing, Technology, Entrepreneurs, Opinion, Leadership, Lifestyle and Lists. Each channel contains an array of more specific sections covering topics as diverse as Sports & Leisure, Travel, Autos, Personal Finance, Intelligent Investing, Mobile, CEO Network and Style & Finance.

Collection Methodology:

Using carefully verified, behavioral targeted data on the Forbes Premium Network, advertisers can pick and choose from over 80 unique Channels and Sections to create custom, highly optimized segments. This first-party data can reach audiences broad or niche.

Use Our Data For:

Forbes Premium Data works best when segments are mixed and matched to create custom audiences of business and finance professionals and affluent consumers.

TiVo Research: A Buyer's Guide

DATA TYPES: TV Viewership

TiVo Research Data 101

TiVo Research is a leading cross-media research, measurement and analytics company that provides nationally representative single-source TV data linked to purchases made at the household level. Partnerships with multichannel video programming distributors and proprietary TiVo set-top box data enables TiVo Research to move beyond standard age, sex and demographics to deliver audience segments based on viewing behavior from an in-tab sample of 2.3 million set-top box households. In addition to the viewing segments available through Oracle Data Cloud, TiVo Research directly matches household-level TV viewing data with both visitation and purchase data in several key categories such as CPG, Auto, Rx, Retail and QSR/ CDR. TiVo Research also matches second-by-second viewing data to digital datasets and CRM databases.

Description of Data Types:

TiVo Research data comes from a nationally representative sample of set-top box data from TiVo and six other providers covering 200 DMAs.

Standard segments

- Heavy/light viewers by network
- Viewers by program
 - » For top 100 primetime programs

- » All NFL, NHL & MLB games
- » News: early morning, talk, news magazine, weekday morning
- Heavy/light viewers by genre
- Rankers by network, program & genre
- Spanish-language segment

Customer segments available upon request.

Collection Methodology:

TiVo Research gathers passive second-by-second set-top box tuning data in a privacy-compliant manner. Tuning data is aggregated, anonymized, normalized and weighted to U.S. Census. It provides the base for audience metrics covering programs, networks, dayparts and genres. Standard segment data comprises live viewing plus three days of playback, with other time periods available upon request. Data comes not only from TiVo DVR boxes, but also from other cable, telco, satellite and over-the-air households. TiVo Research segments are refreshed quarterly, or more frequently as needed, to account for TV seasonality. Customized reports, including TV campaign exposed audiences, are available upon request.

Use Our Data For:

Cross-platform targeting – Use TiVo Research segments to identify the online placement that will reach the people exposed to a TV campaign

Optimizing frequency – Use TiVo Research segments to meet your cross-platform frequency goals across TV and digital

Extending reach – TiVo Research offers the ability to locate hard-to-reach television viewers online by matching TV data deterministically to digital identifiers like cookies, tags, pixels, IP Address and CRM datasets. TiVo Research is also able to probabilistically match TV data to Device IDs

Improving TV tune-in – Measure and optimize how digital campaigns drive TV tune-in

Visa Audiences: A Buyer's Guide

DATA TYPES: Entertainment, Grocery, Restaurant, Retail, Seasonal, Travel

Visa Audiences Data 101

The world's largest retail electronic payments network is now at your fingertips. Visa Audiences powered by DLX provide audiences based on \$1.4 trillion of annual U.S. credit card spend. They are uniquely built from Visa-purchase data combined with Oracle Data Cloud known demographic, financial, purchase and other data on more than 110 million U.S. households.

Description of Data Types:

Choose from pre-built audiences or build custom audiences from criteria such as merchant category, frequency of spend, spend amount, time period and offline vs. online spend.

Visa Audiences categories Include:

- Automotive
- Entertainment
- Grocery
- Restaurant
- Retail
- Seasonal
- Spend Profile
- Technology
- Telecom
- Travel

Collection Methodology:

Aggregated spending insights such as high or frequent spend are culled from U.S. Visa credit-card transactions. These insights are then combined with Oracle Data Cloud demographic, purchase and other data to create Visa Audiences powered by DLX. Visa aggregates and de-identifies all transactional data output for Visa Audiences to protect cardholder and merchant privacy.

Visa Audiences powered by DLX are fueled by:

- \$1.4 T of annual Visa credit-card spend & 16B captured transactions
- Demographic, purchase & other Oracle Data Cloud attributes on 110MM+ HHs

Use Our Data For:

Reaching customers and prospects based on actual retail spending patterns. Choose from more than 100 pre-built audiences or opt to have a custom audience built with purchase-based categories, such as QSR and Entertainment.
